

INSTRUCTIONS for Black Magic Filters®
Installation & Maintenance
Simple as 1, 2, 3, for Fast & Easy Installation
NO Pre-assembly Required!
GREEN MATERIAL
Made from 100% Recycled Material

Step #1: Clean the gutters and downspouts of all debris prior to **Black Magic Filters®** installation.

Black Magic Filters® are the “**ONLY**” **UL Tested Class 1**, Fire Resistant & Flame Retardant Gutter Screening Devices (other than a few metal products) in the market place to date!

Step #2: For best and complete results, place **Black Magic Filters®** over the entire run (length) of the gutter(s) you are trying to protect.

Install Screen Side UP!

1. Once you have the filters out of the box and placed the 4' lengths, on the roof or where you are planning to place the filters in your gutters. Now use a pair of scissors or a box cutter (great care should be taken as the filter material is dense but cuts quickly) and cut the “Back” (short side) part (4” or 5” in length depending on the size of the filters you are installing) of filter to the correct “depth and width” for your individual (custom) gutter hanger.
 2. Slide the filter in place (at the back of the gutter) where you’ve already pre-cut the filter to accommodate the gutter hangers. (You can let the excess piece that you’ve pre-cut, to tuck up inside or you can trim this small part away.)
 3. Now, bend (press the filter) the filter on the score lines (on the inside of the filter) and place the remaining part (longer part of the filter) of the filter in the front of the gutter (the return part of the gutter at the front) and tuck it in place. It’s that simple and your **DONE!!**
- Pine Needles, Leaves, Twigs, and HD Seeds are kept out of the gutter so the maximum amount of water will flow through and into your gutter. 5”, 6”, 7” or ½ Round gutters can be protected with our uniquely designed filters.
 - For best performance it is recommended that you occasionally check the positioning of the filters and clean away any debris that may be tightly lodged in place, between the filters.
 - Occasionally, some debris may become settled upon the “top or crown” of the filter, allowing for the wind and water flow to move away the debris, but it may become necessary to maintenance the top of the filter and easily clean away the excess debris with a broom or hose. **Black Magic Filters®** are easier to maintain than most other conventional gutter protection product because of their superior design and material composition.
 - **Black Magic Filters®** keep your gutters open & free flowing.
